- Relationships between environmental variabels and species richness
- D. Li D. Waller
- Working paper February 10, 2015
- 5 Running headline: Environment and species richness
- 6 Abstract: Your awesome abstract here.

₇ 1 Introduction

- 8 Here is your introduction. It should describe clearly the rationale for the study being done
- 9 and the previous work related with the study. It should also tell readers about your specific
- hypothese/questions being addressed. Citations will be like this (Adair et al. 2010), or (e.g.,
- ¹¹ Clark and Tilman 2008), or (Eriksson and Ehrlén 1993, Williamson et al. 1999)
- Here is the second paragraph of the introduction.

¹³ 2 Methods

Here is the method section. You can include equations easily. For inline equations, use var(X) = p(1-p). For display equation, use

$$var(X) = p(1-p) \tag{1}$$

16 2.1 Results

Plot	sprich
3294	31
3297	28
3299	26
3330	27

- Insert tables by kable in knitr package in R Put results inline, e.g. the mean species richness is 28.
- 19 Insert tables by xtable package in R Show as Table. 2:

Table 2: Caption here

			1		
	Df	Sum Sq	Mean Sq	F value	Pr(>F)
рН	1	4.58	4.58	4.77	0.2733
shade	1	8.45	8.45	8.80	0.2070
Residuals	1	0.96	0.96		

Insert tables by hand Show as Table. 3:

Table 3: Caption here.

Col A	Col B	Col C	Col D
row 1	190	112 ± 2	233 ± 3
η	0.13	0.12	0.12
η^2	0.14	0.13	0.50
η^3	0.15	0.31	0.52

Figures How about figures? We illustrate this in Fig. 1.

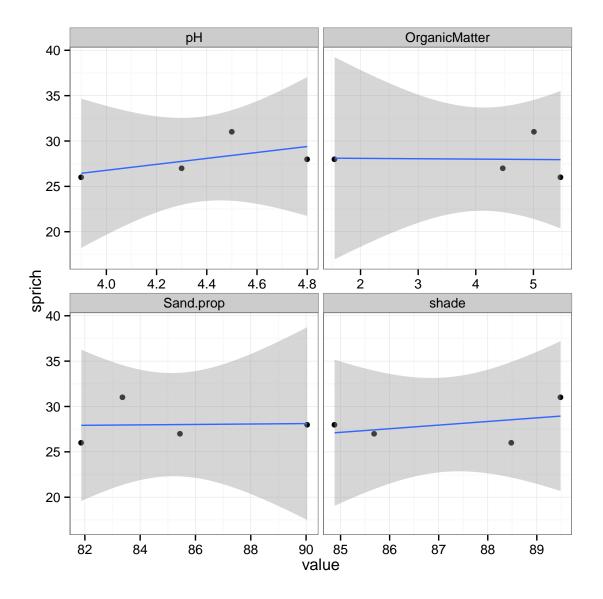

Figure 1: Caption here.
